## THE VIRTUAL MEET EXPERIENCE

2024-2025

HS VCM #6 - THE SQ MEET

### COMPUTER SCIENCE

DO NOT OPEN TEST UNTIL TOLD TO DO SO

The Virtual Challenge Meets $^{\mathrm{TM}}$ 

# 2024-2025 High School VCM #6 - The SQ Meet

#### General Directions:

- 1) DO NOT OPEN EXAM UNTIL TOLD TO DO SO.
- 2) NO CALCULATORS of any kind may be used.
- 3) You have 45 minutes to complete this contest. If you are in the process of actually writing an answer when the signal to stop is given, you may finish writing that answer.
- 4) Papers may not be turned in until forty-five minutes have elapsed. If you finish the test before the end of the allotted time, remain at your seat and retain your paper until told to do otherwise. You may use this time to check your answers.
- 5) All answers must be written on the answer sheet/Scantron card provided. Indicate your answers in the appropriate blanks provided on the answer sheet or on the Scantron card. Clean erasures are necessary for accurate Scantron grading.
- 6) You may place as many notations as you desire anywhere on the test paper except on the answer sheet or Scantron card which is reserved for answers only.
- 7) You may use additional scratch paper provided by the contest director.
- 8) All questions have ONE and only ONE correct (BEST) answer. There is a penalty for all incorrect answers. All provided code segments are intended to be syntactically correct, unless otherwise stated (i.e. error is an answer choice). Ignore any typographical errors and assume any undefined variables are defined as used.
- 9) A reference to commonly used Java classes is provided with the test and you may use this reference during the contest. You may detach the reference sheets from the test booklet but DO NOT DO SO UNTIL THE CONTEST BEGINS.
- 10) Assume that any necessary import statements for **Standard Java 23 Packages** and classes (e.g. .lang, .util, System, Math, Double, etc.) are included in any programs or code segments that refer to methods from these classes and/or packages.

#### Scoring:

1) All questions will receive 6 points if answered correctly; no points will be given or subtracted if unanswered; 2 points will be deducted for each incorrect answer.

For Computer Science practice tests and hands-on materials, go to <a href="https://www.apluscompsci.com">www.apluscompsci.com</a>

#### Standard Classes and Interfaces — Supplemental Reference

#### class java.lang.Object

- o boolean equals(Object other)
- o String toString()
- o int hashCode()

#### interface java.lang.Comparable<T>

o int compareTo(T other)

Return value < 0 if this is less than other.

Return value = 0 if this is equal to other.

Return value > 0 if this is greater than other.

#### class java.lang.Integer implements

#### Comparable<Integer>

- O Integer(int value)
- o int intValue()
- o boolean equals(Object obj)
- o String toString()
- o int compareTo(Integer anotherInteger)
- o static int parseInt(String s)

#### class java.lang.Double implements

#### Comparable<Double>

- O Double (double value)
- o double doubleValue()
- o boolean equals(Object obj)
- o String toString()
- o int compareTo(Double anotherDouble)
- o static double parseDouble(String s)

#### class java.lang.String implements

#### Comparable<String>

- o int compareTo(String anotherString)
- o boolean equals(Object obj)
- o int length()
- O String substring(int begin, int end) Returns the substring starting at index begin and ending at index (end - 1).
- O String substring(int begin)
  - Returns substring(from, length()).
- o int indexOf(String str)
  - Returns the index within this string of the first occurrence of str. Returns -1 if str is not found.
- o int indexOf(String str, int fromIndex)

  Returns the index within this string of the first occurrence
  - Returns the index within this string of the first occurrence of str, starting the search at the specified index.. Returns -1 if str is not found.
- o charAt(int index)
- o int indexOf(int ch)
- o int indexOf(int ch, int fromIndex)
- o String toLowerCase()
- o String toUpperCase()
- o String[] split(String regex)
- o boolean matches (String regex)

#### class java.lang.Character

- o static boolean isDigit(char ch)
- o static boolean isLetter(char ch)
- o static boolean isLetterOrDigit(char ch)
- o static boolean isLowerCase(char ch)
- o static boolean isUpperCase(char ch)
- o static char toUpperCase(char ch)
- o static char toLowerCase(char ch)

#### class java.lang.Math

- o static int abs(int a)
- o static double abs(double a)
- o static double pow(double base,
  - double exponent)
- o static double sqrt(double a)
- o static double ceil(double a)
- o static double floor(double a)
- o static double min(double a, double b)
- o static double max(double a, double b)
- o static int min(int a, in b)
- o static int max(int a, int b)
- o static long round(double a)
- o static double random()

Returns a double value with a positive sign, greater than or equal to 0.0 and less than 1.0.

#### interface java.util.List<E>

- o boolean add(E e)
- o int size()
- o Iterator<E> iterator()
- o ListIterator<E> listIterator()
- O E get(int index)
- o E set(int index, E e)

Replaces the element at index with the object e.

- o void add(int index, E e)
  - Inserts the object e at position index, sliding elements at position index and higher to the right (adds 1 to their indices) and adjusts size.
- o E remove(int index)
  - Removes element from position index, sliding elements at position (index + 1) and higher to the left (subtracts 1 from their indices) and adjusts size.

#### class java.util.ArrayList<E> implements List<E>

#### class java.util.LinkedList<E> implements

List<E>, Queue<E>

#### Methods in addition to the List methods:

- o void addFirst(E e)
- o void addLast(E e)
- O E getFirst()
  O E getLast()
- O E removeFirst()
- o E removeLast()

#### class java.util.Stack<E>

- o boolean isEmpty()
- o E peek()
- o E pop()
- O E push(E item)

#### interface java.util.Queue<E>

- o boolean add(E e)
- o boolean isEmpty()
- o E peek()
- o E remove()

#### class java.util.PriorityOueue<E>

- o boolean add(E e)
- o boolean isEmpty()
- o E peek()
- o E remove()

#### interface java.util.Set<E>

- o boolean add(E e)
- o boolean contains(Object obj)
- o boolean remove(Object obj)
- o int size()
- o Iterator<E> iterator()
- o boolean addAll(Collection<? extends E> c)
- o boolean removeAll(Collection<?> c)
- o boolean retainAll(Collection<?> c)

#### class java.util.HashSet<E> implements Set<E>

#### class java.util.TreeSet<E> implements Set<E>

#### interface java.util.Map<K,V>

- o Object put(K key, V value)
- O V get(Object key)
- o boolean containsKey(Object key)
- o int size()
- o Set<K> keySet()
- o Set<Map.Entry<K, V>> entrySet()

#### class java.util.HashMap<K,V> implements Map<K,V>

#### class java.util.TreeMap<K,V> implements Map<K,V>

#### interface java.util.Map.Entry<K,V>

- o K getKey()
- o V getValue()
- o V setValue(V value)

#### interface java.util.Iterator<E>

- o boolean hasNext()
- o E next()
- o void remove()

#### interface java.util.ListIterator<E> extends

#### java.util.Iterator<E>

#### Methods in addition to the Iterator methods:

- o void add(E e)
- o void set(E e)

#### class java.lang.Exception

- o Exception()
- O Exception (String message)

#### class java.util.Scanner

- o Scanner(InputStream source)
- o boolean hasNext()
- o boolean hasNextInt()
- o boolean hasNextDouble()
- o String next()
- o int nextInt()
- o double nextDouble()
- o String nextLine()
- o Scanner useDelimiter(String pattern)

#### 2024-2025 Virtual Challenge Meet #6 - The SQ Meet - Computer Science

Note: Correct responses are based on **Java SE Development Kit 23** (**JDK 23**), from Sun Microsystems, Inc. All provided code segments are intended to be syntactically correct, unless otherwise stated (i. e. error is an answer choice) and any necessary Java SE 23 Standard Packages have been imported. Ignore any typographical errors and assume any undefined variables are defined as used. **For all output statements, assume that the System class has been statically imported using:** *import static java.lang.System.\****;** 

```
QUESTION 1
 What is 33<sub>14</sub> plus 11<sub>11</sub> ?
A. 60<sub>10</sub>
                          B. 2125
                                             C. 5910
                                                                      D. 1127
                                                                                              E. 63<sub>10</sub>
QUESTION 2
What is output by the code to the right?
                                                                 int a = 7 + 8 % 10 - 5;
A. 14
                                      B. 10
                                                                 System.out.println(a);
C. 25
                                      D. 24
E. There is no output due to a syntax error.
QUESTION 3
What is output by the code to the right?
                                                                 double b = 10 / 3;
                                                                 System.out.printf("%.2f",b);
                         C. 0
A. 1.67
             B. 1
                                      D. 3.00
E. There is no output due to a syntax error.
QUESTION 4
What is output by the code to the right?
                                                                 String s = "funny man";
A. 0
                                      B. 6
                                                                 int z = s.indexOf(97);
C. 7
                                      D. -1
                                                                 System.out.print(z);
E. There is no output due to a syntax error.
QUESTION 5
                                                                 boolean one = true;
What is output by the code to the right?
                                                                 boolean two = one & true;
                                                                 two = !two;
A. true
                                                                 two = two | !one;
B. false
                                                                 System.out.println( two );
QUESTION 6
What is output by the code to the right?
                                                                 Double r = Math.ceil(3.6);
A. 4.0
                                      B. 3.0
                                                                 out.println(r);
C. 4
                                      D. 3
E. There is no output due to a runtime exception.
QUESTION 7
What is output by the code to the right?
                                                                 int y = 8 / 3;
                                                                 int a = y / 2;
A. 2
                                      B. 1
                                                                 System.out.println( a );
C. 3
                                      D. 0
E. There is no output due to a syntax error.
```

```
QUESTION 8
What is output by the code to the right?
                                                            int a=9;
                                                           if(a > 5)
A. 123
                                                              out.print(1);
B. 13
                                                           if(a > 7)
                                                              out.print(2);
C. 23
                                                            out.println(3);
D. 3
E. 1
QUESTION 9
What is output by the code to the right?
A. 33
                                                            int u = 8;
                                                            for ( u = 3; u < 33; u++)
B. 40
                                                             u = u + 2;
C. 27
                                                           out.println(u);
D. 35
E. There is no output due to a syntax error.
QUESTION 10
What is output by the code to the right?
A. 22
                                                            int[] w = {3,7,8,22,14,212};
B. 8
                                                            out.print( w[3] );
C. 14
D. 7
E. There is no output due to a syntax error.
QUESTION 11
                                                            String p = "The BEST UIL CS teams";
What is output by the code to the right?
                                                            p = "use A+ Computer Science!";
                                                           p = "www.apluscompsci.com";
                                   B. sci
A. www
                                                           Scanner sc = new Scanner(p);
C. aplus
                                   D. sci.com
                                                           sc.useDelimiter("comp");
E. .com
                                                           sc.next();
                                                           System.out.print(sc.next());
QUESTION 12
What is output by the code to the right?
                                                            int q = 0;
A. 0
                                   B. 156
                                                           for ( int u = 2; u < 40; u+=4)
                                                              q += u++;
C. 129
                                   D. 135
                                                            out.println(q);
E. There is no output due to a syntax error.
```

```
QUESTION 13
Which of the following operators would be processed first?
A. ?:
B. ~
C. new
D. ^
E. +=
QUESTION 14
What is output by the code to the right?
A. 0
                                                           float x = Float.MIN VALUE;
B. 0.00
                                                           out.printf("%.2f",x);
C. -32768.00
D. 32767
E. NaN
QUESTION 15
What is output by the code to the right?
A. 0
                                                           List<Integer> a;
B. null
                                                           a = new ArrayList<>();
                                                           out.print(a.add(3));
C. 3
D. true
E. false
QUESTION 16
                                                           int b = 2+3*3/3;
What is output by the code to the right?
                                                           switch(b){
                                                             case 2 : b = 4; break;
A. 6
                                  B. 4
                                                             case 3 : b = 6; break;
C. 0
                                  D. 3
                                                             case 4 : b = 8; break;
E. 8
                                                             case 5 : b = 0; break;
                                                           out.println(b);
QUESTION 17
                                                           int k = 99;
What is output by the code to the right?
                                                           int j = 0;
                                                           int t = 0;
A. 9604
B. 9601
                                                           while ( t != k ) {
C. 9801
                                                             j += (1 + t * 2);
                                                             t++;
D. 9816
E. 9999
                                                           out.println(j);
                                                           boolean k = false, m = true, p = true;
What is output by the code to the right?
                                                           System.out.println(k ^ m \&\& (k || p));
A. false
            B. true
```

```
QUESTION 19
                                                          PriorityQueue<Double> f;
What is output by the code to the right?
                                                          f = new PriorityOueue<>();
A. [1.0, 1.5, 3.1, 2.7, 3.3]
                                                          f.add(3.3);
                                                          f.add(3.1);
B. [1.0, 1.5, 3.3, 3.1, 2.7]
                                                          f.add(2.7);
C. [1.0, 1.5, 2.7, 3.1, 3.3]
                                                          f.add(1.0);
                                                          f.add(1.5);
D. [1.0, 1.5, 3.1, 3.3, 2.7]
                                                          System.out.println(f);
E. There is no output due to a runtime error.
QUESTION 20
                                                          double dbl = Math.round(Math.sqrt(50));
What is output by the code to the right?
                                                          System.out.print(dbl);
A. 7.0
                                  D. 9
            B. 8.0
                      C. 7
                                              E. 9.0
QUESTION 21
What is output by the code to the right?
                                                          System.out.println(9 ^ 8 | 11 & 3);
A. 2
            B. 4
                       C. 9
                                  D. 3
                                              E. 6
QUESTION 22
Integer[] n = \{4, 2, 4, 2, 1\};
                                                          public int dup(Integer[] n)
What is returned by dup (n)?
            B. 2
A. 1
                      C. 3
                                  D. 4
                                              E. 5
                                                              int x = 0;
QUESTION 23
                                                              for(int i=0; i < n.length; i++)</pre>
                                                                 x = x ^n[i];
Integer[] n = \{54, 102, 32, 59, 102, 32, 18, 54, 59\};
                                                              return x;
                                                          }
What is returned by dup (n)?
A. 18
            B. 32
                       C. 54
                                  D. 60
                                              E. 102
QUESTION 24
                                                          public class YEP
What is returned by the method call YEP.doh (7.0)?
                                                             public static double doh(int x) {
A. 14.0
                      B. 20.0
                                                               return 3*x;
C. 28.0
                       D. 21.0
                                                            public static double doh(double x) {
E. There is no output due to a runtime error.
                                                               return 2*x;
                                                             }
                                                          }
QUESTION 25
What is returned by the method call mask (6)?
                                                          public static int mask(int x)
                      C. 30
                                              E. 720
A. 360
            B. 6
                               D. 120
                                                             if(x<1)
                                                               return 1;
QUESTION 26
                                                             else
                                                               return mask(x-1) * x;
What is returned by the method call mask (3)?
                                                          }
A. 360
            B. 6
                      C. 30
                                D. 120
                                             E. 720
```

```
QUESTION 27
What is output by //1 in the code to the right?
A. 7
                                                            Stack<Integer> e;
                                                            e = new Stack<>();
B. 212
                                                            e.add(7);
C. 5
                                                            e.add(212);
                                                            e.add(5);
D. 2
                                                            e.add(2);
E. 1
                                                            e.push(1);
QUESTION 28
                                                                                             //1
                                                            out.println(e.peek());
What is output by \frac{1}{2} in the code to the right?
                                                            e.add(8);
A. 1
                                                            e.push(3);
B. 2
C. 5
                                                            out.println(e.pop()); //2
D. 8
E. 3
QUESTION 29
Which of the following should fill <*1> if speed is the primary
concern for inserting and accessing the items in the Map?
A. new Map<>()
B. new TreeMap<>()
                                                            Map<Integer, Integer> m;
                                                            m = <*1>;
C. new HashMap<>()
                                                            m.put(3,9);
D. A and B only
                                                            m.put(11,4);
                                                            m.put(6,1);
E. B and C only
                                                            m.put(5,3);
QUESTION 30
                                                            m.put(3,77);
What is output by the code to the right?
                                                            m.put(3,212);
A. 1
                                                            out.println(m.size());
B. 2
C. 3
D. 4
E. 5
```

#### QUESTION 31 What is output by the line marked //1 in the code to the right? A. 11 **B**. 10 **C**. 15 String s = "2i1rh##hd2366@@#";**D**. 13 String $p = " \setminus p{Punct}";$ E. 9 s = s.replaceAll(p,""); QUESTION 32 //1 out.println(s.length()); What is output by the line marked //2 in the code to the right? A. 2i1rh##hd2366@@# //2 out.println(s); B. 2i1rhhd2366@@ C. 2i1rh##hd2366# D. ##@@# E. 2i1rhhd2366 QUESTION 33 $int[] a = {5,4,3,2,1};$ What is returned by go(a, 0)? A. -1 **B**. 0 C. 1 **D**. 2 E. 3 QUESTION 34 public static int go(int[] a, int x) int[] a = $\{5,4,3,2,1,4,7,1\};$ for (int i=x-1; i>=0; i--) What is returned by go(a, 2)? if(a[i]>a[x])**A**. -1 B. 1 **C**. 3 **D**. 5 E. 7 return i; QUESTION 35 return -1; int[] a = {-3,11,5,212,3,7,1,4,7,1,8,33,11}; What is returned by go(a, 5)? A. -1 **C**. 3 B. 1 D. 5 **E**. 7 QUESTION 36

Assume that method superSort(Object[] objs) is  $O(N^3)$  where N = obj.length. When method superSort is passed an Object array of length 10000 it takes 0.50 seconds for method superSort to complete. If method superSort is passed an Object array of length 20000, how many seconds would it take superSort to complete?

A. 1.00

B. 1.50

C. 2.00

D. 4.00

E. 3.00

#### QUESTION 37

If the following items were inserted into a binary search tree in the following order, how many leaves would exist?

10 78 77 33 124 -4 31 2 45 111 3 -6 50 212 37

#### QUESTION 38

Using the tree created in question 37, what is the height of the tree? Count the edges.

#### QUESTION 39

Using the tree created in question 37, what is the diameter of the tree? Count the edges.

#### QUESTION 40

Which boolean law is demonstrated below?

$$\overline{A\cdot B}=\overline{A}+\overline{B}$$
